

E906/SeaQuest Report

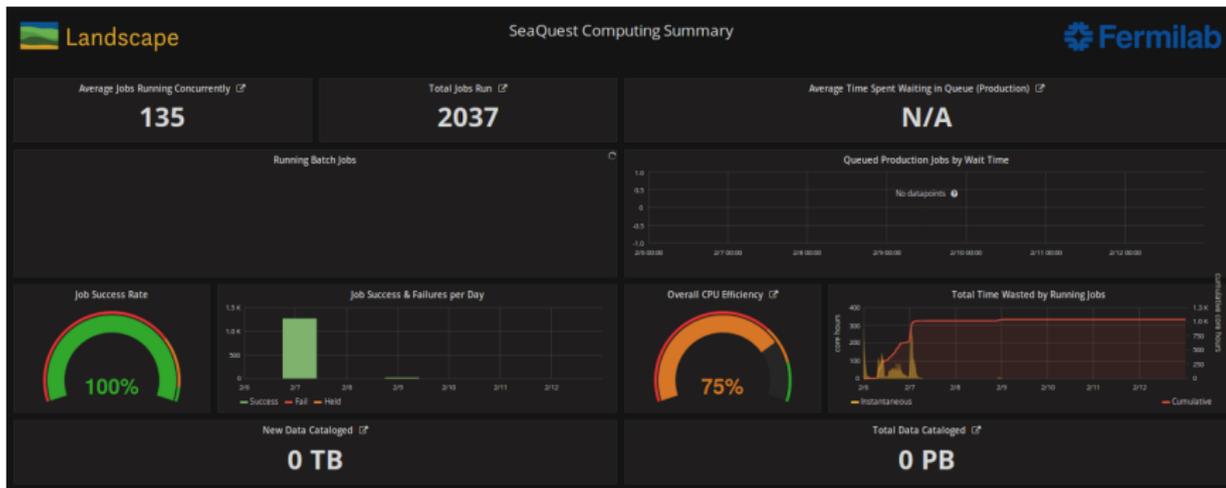

Michelle M. Medeiros
for the SeaQuest Collaboration

Feb. 13, 2017.

Computing usage.

General status.

- Taking data with the solid targets.
- Got deuterium bottles delivered last week. While following steps to fill the liquid targets, found out that both fill lines (D2 and H2) have leaks → looking for the leaks, will replace the relief valve soon.
- One of our MySQL databases was full → cleaned up to free space.
- Found dead regions in prop tubes → fixed by changing the connection of a few cables.
- Have had some ROC crashes → using detailed error messages to optimize our new DAQ.
- Currently working on the trigger timing and measuring the trigger efficiency.
